13. ☑ Other: <u>See Continuation Sheet</u> .							
/Patrick N. Edouard/							
Supervisory Patent Examiner, Art Unit 2626							
•							

Continuation of 11. does NOT place the application in condition for allowance because: Regarding applicant's arguments (Remarks, page 9-10) that the reference from Nadon is not analogous art and one of ordinary skill in the art of audio compression could not possibly have had a motivation to combine. MPEP (2141.01 (a) I) states that a reference is reasonally pertinent if, even though it may be in a different field from that of the inventor's endeavor, it is one which, because of the matter with which it deals, logically would have commended itself to an inventor's attention in considering his problem.

The examiner notes that Nadon shows a data distribution on the front page and also points out (Nadon, [0057]) skewness and kurtosis measures are standard statistical indices which can be found in a statistic book by Stuard and Ord ("Disribution theory, New York, Halsted Press, 1994"). Robinson and Nadon are concerning a problem of modeling distribution of data which is reasonably pertinent to the particular problem with which the inventor was concerted, in which the inventor uses some standard statistic measurement of data distribution for audio coding. The standard statistic measurements can be used for different data regardless whether they are from speech samples or from genomic samples.

Continuation of 13. Other: The applicant amended claims 19, 26 and 29 to overcome objection to informalities. The objection is withdrawn.
